emSigner: An End-to-end Paperless Solution for Healthcare

TIt is no surprise that medical data is 50 times more valuable in the black market than financial information. The obvious reasons being the host of opportunities that it presents for illegal operations such as insurance fraud, blackmailing and so on.

Why leave such a highly priced data on paper and make it easier for people with malicious intent to access it? Convert it into digital format and make sure that only people with appropriate authority or rather people within the workflow access, view and modify it using emSigner, eMudhra's propriety paperless office solution. Built on top of a powerful PKI technology, this paperless solution also allows you to digitally sign documents using legally valid Digital Signatures to add a level of authenticity and integrity that is unheard of in the industry.

Here are some of the highlights of our unique paperless solution:

- Streamline Onboarding of Patient, Vendor and Employee
- Automate the Signing of Documents such as Prescriptions, Discharge forms, Observation Summaries, Insurance Claim Forms, Claim Settlement Forms, Invoices, Purchase Orders, etc.
- Encrypt and Decrypt Sensitive Patient Related Documents
- Reduce the Complication Involved in Management of Lab Reports and Other Medical Documents
